Hon. C. C. Boxbyshell,
Superintendent of the Mint at Philadelphia.

Dear Sir:-

I am investigating inter-national bimetallism in connection with the Department of Political Economy and Finance at our University; and if you should feel inclined to answer a few questions, you would place me under the greatest obligations to you,

If the value of silver was raised to correspond to gold at the ratio of 15 1/2:1, do you think that the world's silver production would be increased sufficiently to cause a depreciation of the currency and a serious rise of prices?

Would the increased production, if any took place, be of long duration?

If ~~Great~~ Britain, France, Germany, and the U. S. should adopt international bimetallism at the ratio of 15 1/2:1, would the increased production, if any, be likely to disturb that ratio?

Is it probable that the cost of producing

1897

the precious metals will be much cheapened by improved metallurgical Processes?

Is it safe to assume that new discoveries will be off-set by the failing of old mines?

Is it probable that we have reached the maximum production of gold and silver and that the general tendency in the future will be for one or both to decrease?

Is the production of gold or silver apt to be the steadier in the future?

I shall feel under great obligations to you for any information that you may give me.

Begging pardon for thus intruding upon your kindness, being an entire stranger,

I am, Very respectfully yours
Chas C. Parlin.
